

Kämmer Series 051000

Tank Flush Valve

Series 051000

Description

This unique valve is typically used for On-Off bottom drain tank applications, where flushing or fluid transfer is necessary. The valve mounts flush to the tank with a plug extending into the tank and with the seat ring flush with the inner wall of the tank.

The valve's compact, lightweight design is ideal for in-line maintenance under the tank. It can be specified with either a 45° or 60° outlet angle. Other options include bellows seal, normalising fins, a special pocket-free body, steam jacketing or a plug that retracts into the body (as opposed to the standard design with an extending plug).

The tank flush valve can also be supplied as a control valve.

Standard valve with extending plug

Special valve with retracting plug

Series 051000

Technical Data

Valve body style	Tank flush valve
Characteristics	On-Off, Linear, Equal%
Seat leakage	$\leq 0.01\%$ of K_{vs} -value, Class IV acc. to DIN IEC 534 - higher requirements on request
Body material	1.4571, other materials optional
Material for plug/seat ring	Same as body material
PTFE- soft seat (T=max 150°C)	Plug with PTFE insert for tighter seating
Packing	PTFE for temperatures up to 200 °C Grafoil for temperatures over 200 °C
Body gasket	PTFE for temperatures up to 200 °C, grafoil for temperatures over 200 °C
Designs	Valve with extending plug, valve with retracting plug, normalising fins, bellows seal
Sizes	The outlet size is either smaller or the same size as the inlet, see table on page 6
Connections	DIN-Flanges PN10 - 40 or ANSI Flanges Class 150 - 300
Outlet angle	45°, optional 60°
Seat ring height / seat diameter	30mm standard, other dimensions optional. Seat ring diameter made to customers request
