## Features

The Masoneilan LincolnLog is the premier high-pressure liquid letdown valve in the process control industry. It is a field proven severe service solution for cavitating and erosive applications in various industries. The LincolnLog is uniquely designed to operate reliably in harsh environments and dirty liquids. Key design features of the LincolnLog include:

### Cavitation Elimination

The multi-step flow path created by the LincolnLog trim design, reduces the pressure drop in multiple stages without allowing the local pressure to drop below the fluid vapor pressure thus preventing cavitation. These active stages throttle in unison to avoid taking the full pressure drop across any individual stage.

### Dirt Tolerant

Wide flow paths in the LincolnLog allow free passage of large particles through the unique trim and body design without causing any damage or loss of capacity. This ensures continuous and efficient operation by eliminating concerns of potential clogging due to entrained particles. The LincolnLog is a proven problem solver in dirty service applications.

### Heavy Plug Guiding

Guiding is provided along the full length of the plug by a hardened liner, which minimizes any vibration effects and results in excellent dynamic stability. This helps to improve product yield through accurate and smooth process control.

### Versatile Trim Options

Standard LincolnLog trim is available in 3, 4 and 6 stages with different staging ratios to cover the vast majority of high-pressure liquid letdown services. Masoneilan can also provide engineered solutions consisting of additional stages

to satisfy specific application requirements. The LincolnLog is available with both balanced and unbalanced plug designs for greater application flexibility.

### Protected Seat Design

Overlap is designed into the trim at low lift to keep high velocity flow away from the valve seat. This helps to avoid seat erosion and extends the operating life under high pressure drop conditions.

### Reliable Tight Shutoff

Standard seat leakage rating for the LincolnLog meets IEC 534-4 and ANSI/FCI 70.2 Class V shutoff. An optional soft seat design provides Class VI bubble tight shutoff. It includes a patented sliding metal collar design, which protects the soft seat from extruding and serves as a back-up seating surface. The LincolnLog can also be supplied with block valve tight shutoff per MSS-SP-61.

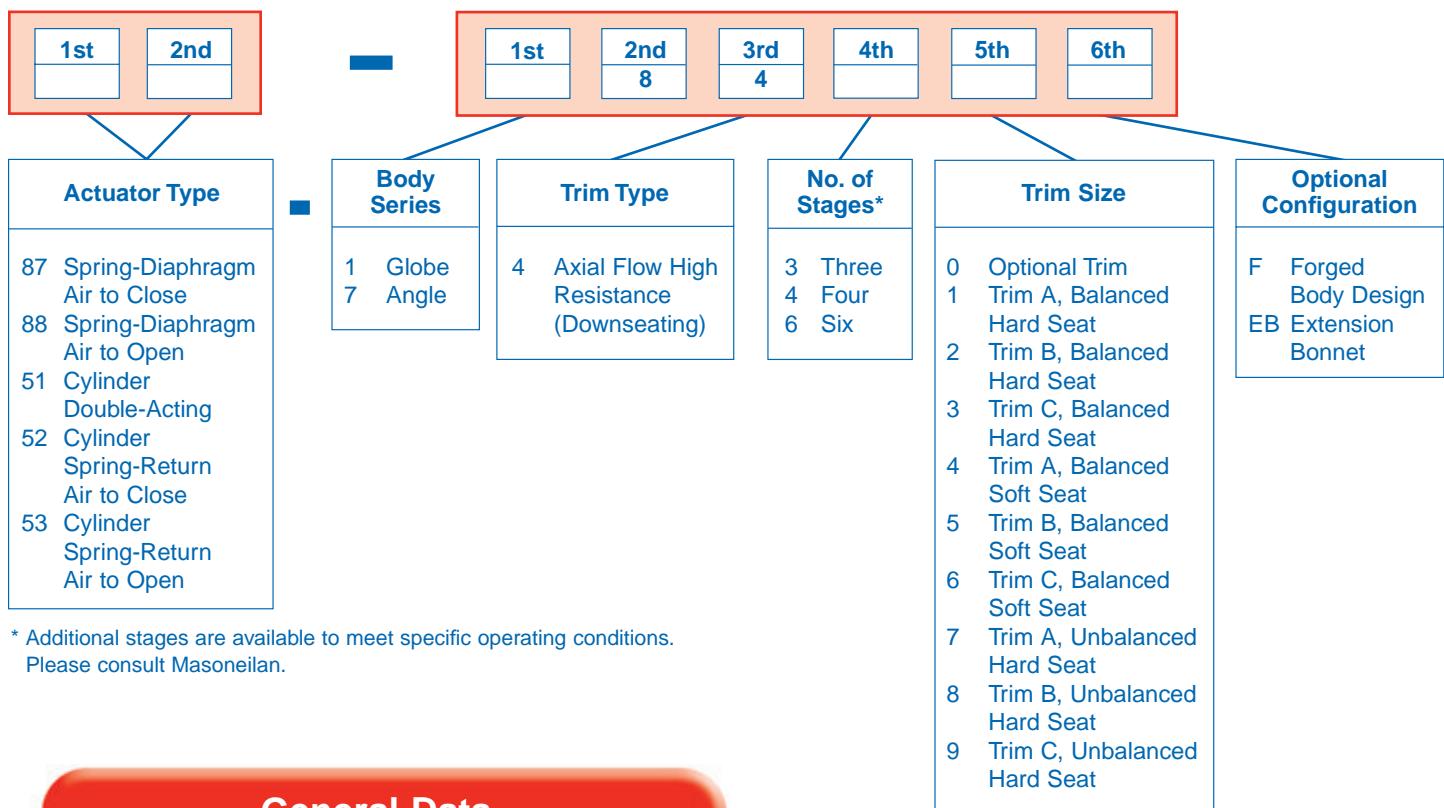

### Ease of Maintenance

LincolnLog's simple top-entry design includes quick change trim for easy access and removal. The integral liner and seat ring also reduces the number of components and simplifies assembly and disassembly.

### NACE and PED Compliance

The LincolnLog is available for Sour Service Applications using the design and construction methods defined in NACE Standard MR 0103. Product configurations for applications requiring compliance to MRO175 - 2003 or ISO 15156 are also available upon request. The LincolnLog is also designed for compliance with Pressure Equipment Directives (PED) requirements.

## Numbering System

## General Data

- Flow Direction**

standard: flow-to-open

- Body**

type: cast or forged globe style  
cast or forged angle style  
sizes: 1" to 8" (DN 25 to DN 200)  
ratings: ANSI Class 600 to 2500  
(ISO PN 100 to 420)  
API 5000 to 10000  
end connections: RFF, RTJ, socket weld,  
butt weld, threaded  
print flanges (forgings)

- Bonnet**

type: bolted  
standard  
extension

- Body and Bonnet**

materials: carbon steel  
316 stainless steel  
chrome-moly  
others

- Trim**

plug type: multi-step axial flow  
(3, 4 and 6 stages)  
seat type: quick change  
integral with plug liner (1" & 1.5" sizes)  
metal seat  
soft seat  
guide: heavy top guided (liner)  
 $C_V$  ratio: see Flow Capacity tables (page 5)  
flow characteristics: modified linear (see page 6)

- Actuator**

type: spring-diaphragm  
spring-return cylinder  
double-acting cylinder  
handwheel: optional

Optional designs are also available, such as larger sizes, higher pressure ratings, special materials, or additional trim stages as required. Consult factory for design details and specifications.

## Temperature Range / Seat Leakage

Valve Sizes		Trim Type	Seat Type	Temperature Range <sup>(1)</sup>		Seat Leakage Class <sup>(2)</sup>
inches	DN			min.	max. <sup>(4)</sup>	
1	25	Unbalanced	Metal Seat	-20°F (-29°C)	600°F (316°C)	V (See Note 3)
1.5 to 8	40 to 200	Balanced	Metal Seat	-20°F (-29°C)	450°F (232°C)	
		Unbalanced	Metal Seat	-20°F (-29°C)	600°F (316°C)	
2 to 8	50 to 200	Balanced or Unbalanced	Soft Seat	-20°F (-29°C)	450°F (232°C)	VI

1. Designs for higher or lower temperatures are available. Please consult Masoneilan.

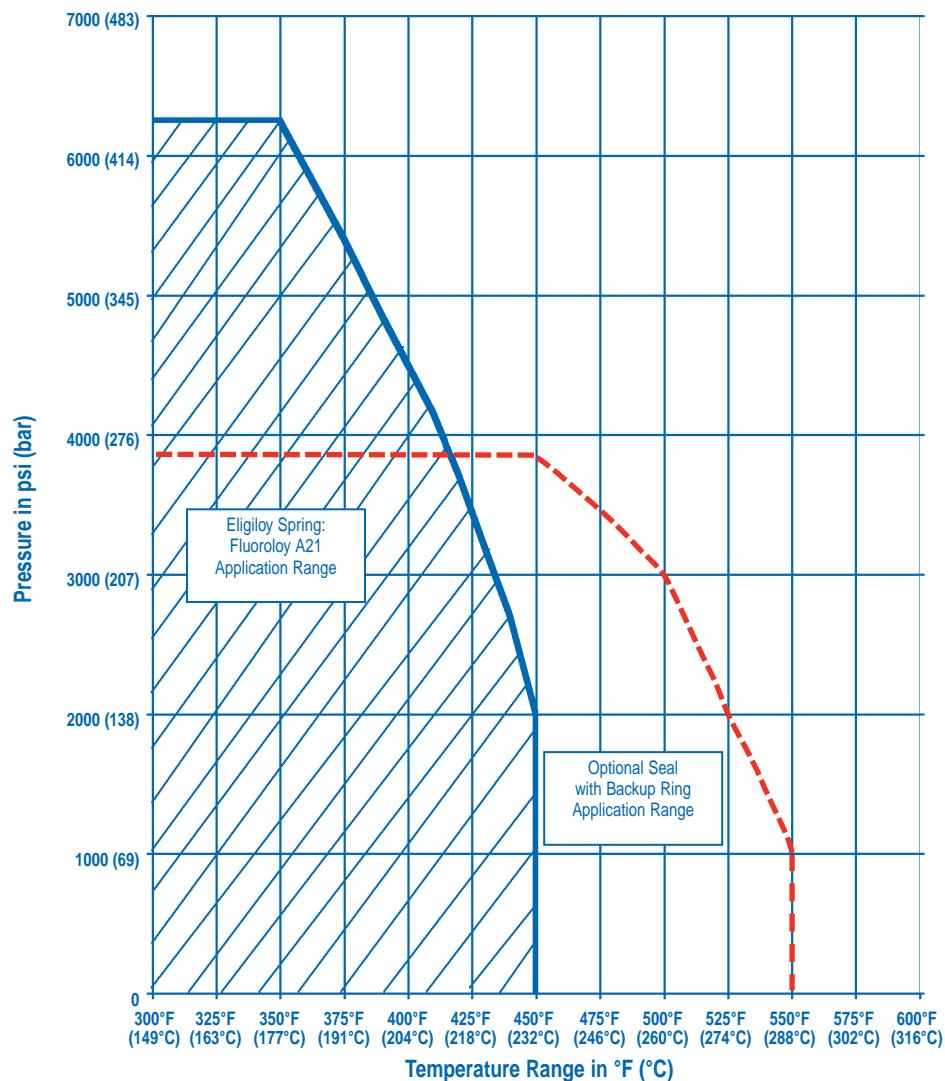

2. Seat leakage class ratings per IEC 534-4 and ANSI/FCI 70.2. Class V seat leakage is standard and Class VI is optional.

3. Optional block valve tight shutoff per MSS-SP-61 also available.

4. Max. temp. limit of 600°F (316°C) with unbalanced trim requires use of optional flexible graphite packing or an extension bonnet.

## Balance Seal Pressure and Temperature Limits

### LincolnLog 78400/18400 Balance Seal Pressure-Temperature Application Range

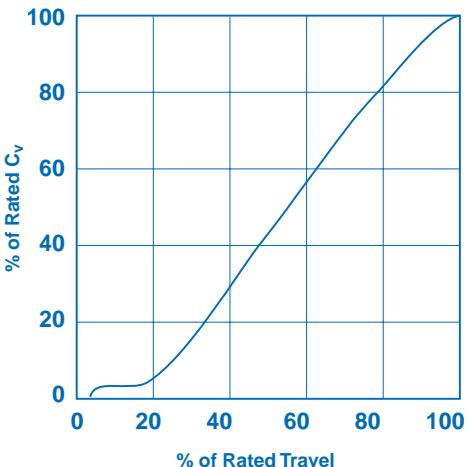

## Flow Characteristics

The LincolnLog trim provides a smooth modified linear control characteristic with "clearance flow" capacity over the initial 15% of valve travel as shown in the generic chart and table at right.

Incorporation of the multi-stage "clearance flow" design concept prevents high pressure drops across the LincolnLog seating area while throttling at low lifts. This feature helps to extend trim life significantly, resulting in dependable and tight shutoff whenever required. It also improves the throttling control stability and performance at low lifts, while providing smooth, accurate and continuous capacity control from 15% to 100% plug travel. Controllability extends from the Maximum Rated  $C_v$  to the Minimum Controllable  $C_v$  for any valve size resulting in typical turndown ratios of 50:1.

### LincolnLog $C_v$ vs. Travel

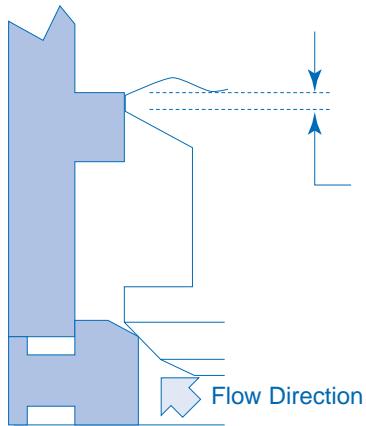

% Max. Opening	5	10	20	30	40	50	60	70	80	90	100
% Max. $C_v$	*	*	3	15	27	39	52	64	76	88	100

\* Clearance Flow Only

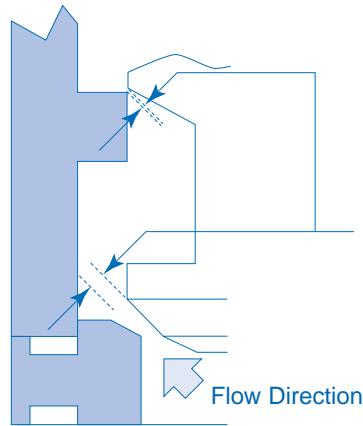

## Trim Seat Protection

The "clearance flow" feature described in the previous section is achieved through the trim overlap design illustrated below:

### LincolnLog Trim Overlap Seat Protection Feature

**0 - 15% of Plug Travel**  
Trim overlap with the valve in the closed or low lift positions.

**15 - 100% of Plug Travel**  
There is much greater flow area through the valve seat versus the plug notches. As a result, pressure drop and velocities across the critical seating surfaces are controlled eliminating seat damage.

## Valve Sizing Guidelines

### General

LincolnLog multi-stage control valves can be sized using either standard IEC/ISA equations or using the latest Masoneilan sizing and selection software program.

### Noise Predictions

Valve noise calculations can be performed using the Masoneilan sizing and selection program based on the latest IEC equations. The serial stage construction of the LincolnLog design helps to significantly reduce trim noise. Calculating the noise at the last stage of the LincolnLog trim will closely approximate the overall valve noise produced. Pressure drop across the last stage can be derived from the table below and used in the noise calculations.

### Trim Selection

As indicated in the table below, the LincolnLog is available in various standard trim types and number of stages. Each trim

style provides different staging ratios and different pressure drop percentages per stage. Recommended limits for  $\Delta P$  per stage are 800 psi (60 bar) for continuous duty cycle applications and up to 1000 psi (70 bar)  $\Delta P$  per stage for intermittent service. The recommended operating throttling  $\Delta P$  limits are also shown in the table below.

### Engineered Solutions

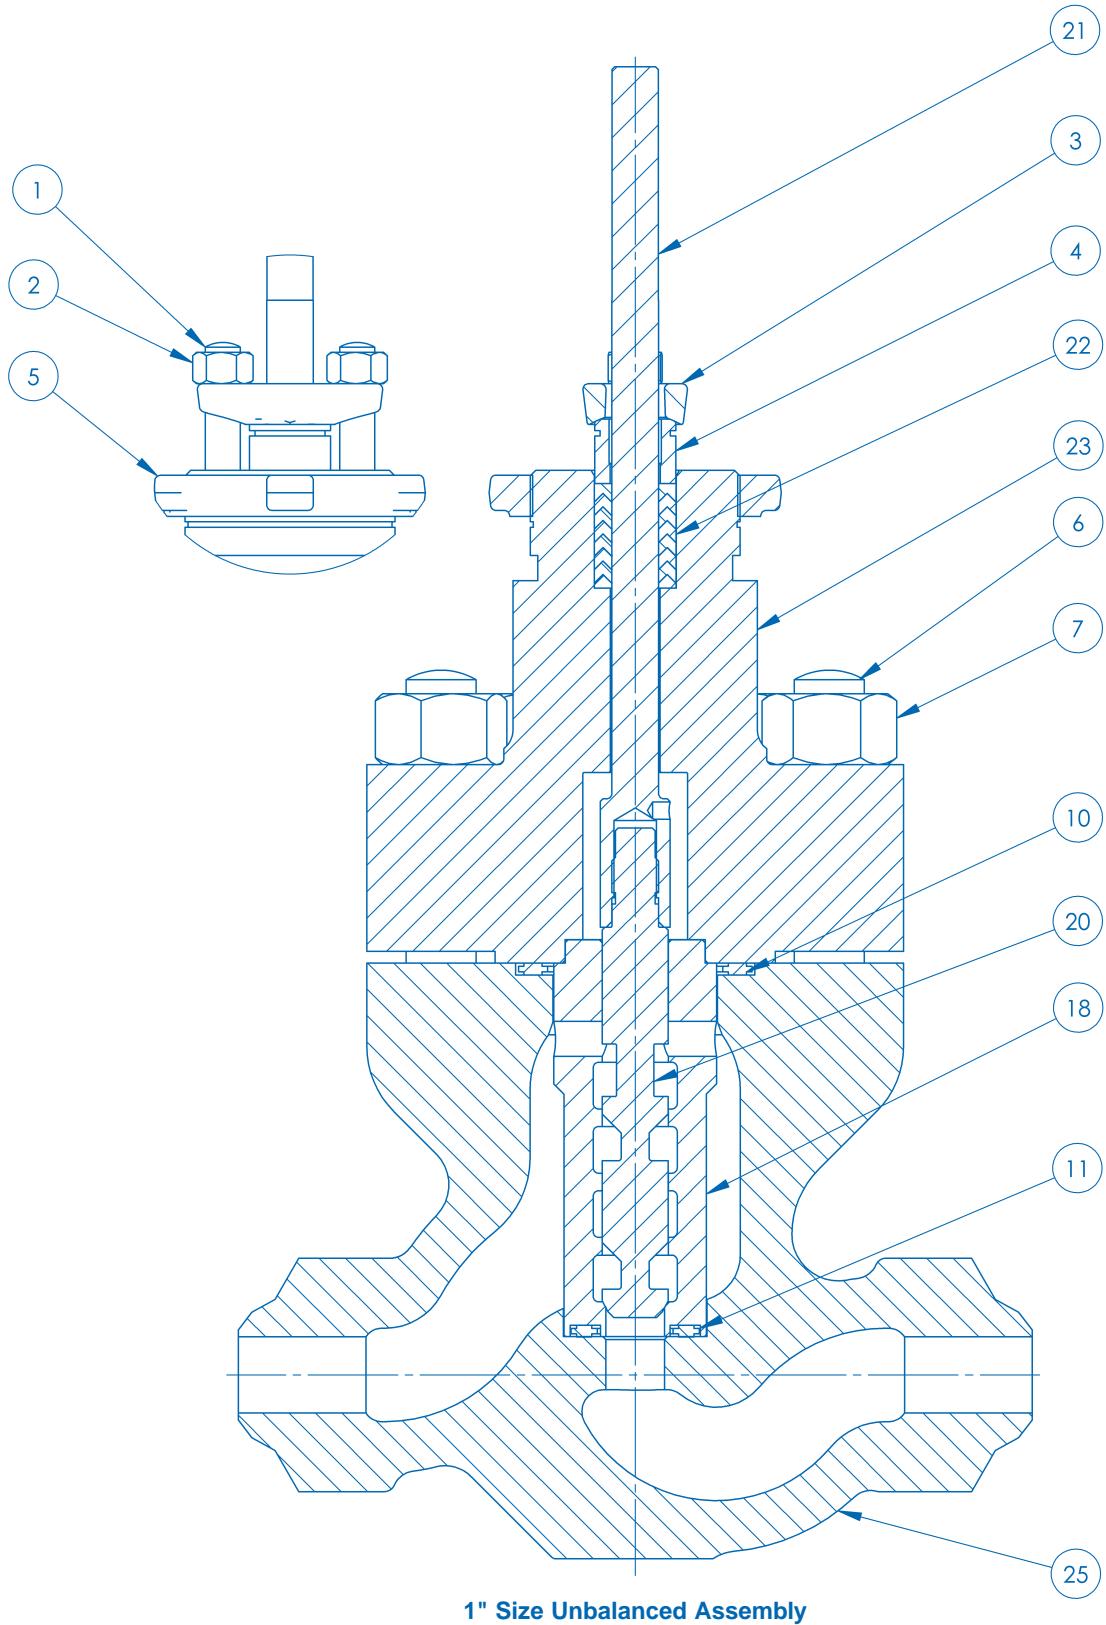

For flashing service, the expansion ratio of the fluid will determine the appropriate staging ratio to apply. Non-standard staging ratios can be supplied for compressible two-phase flow or flashing conditions not covered by the standard trim. Please consult Masoneilan for proper sizing and design of engineered solutions for these types of applications.

## Staging Ratios & Pressure Drop Guidelines

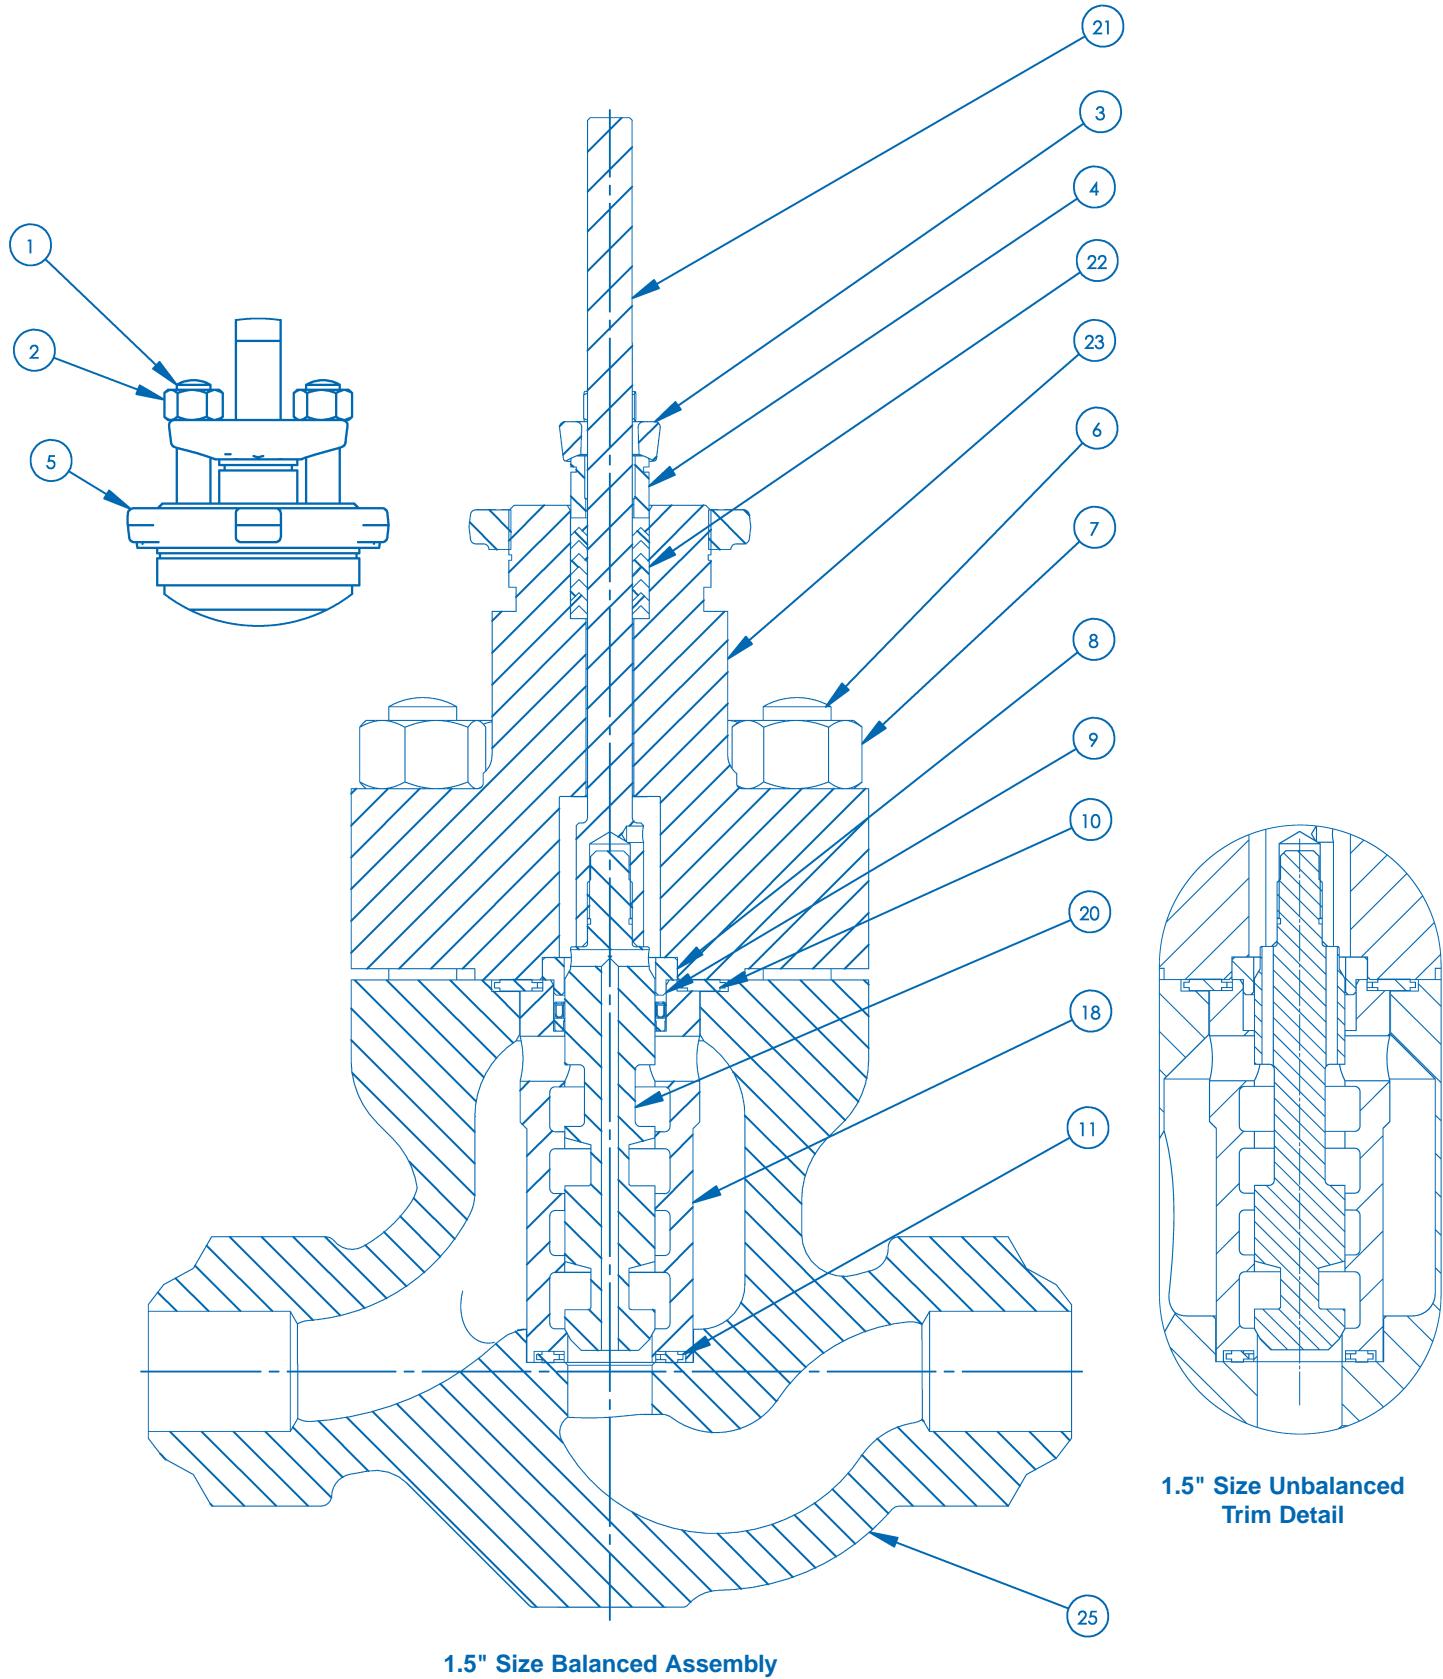

Trim Type	No. of Stages	Staging Ratios <sup>(1)(2)</sup>	Pressure Drop per Stage <sup>(3)</sup>		Maximum Recommended Throttling $\Delta P$			
			Stages	Fraction of Total $\Delta P$	Continuous Service		Intermittent Service	
					psi	bar	psi	bar
C	3	1-1-2	1 to 2	.44	1595	110	2030	140
			3	.11				
C	4	1-1-1-2	1 to 3	.31	2248	155	2900	200
			4	.08				
B	4	1-1-2-3	1 to 2	.42	1885	130	2320	160
			3	.11				
			4	.05				
A	4	1-1-2-4	1 to 2	.43	1885	130	2320	160
			3	.11				
			4	.03				
C	6	1-1-1-1-1-2	1 to 5	.19	3698	255	4713	325
			6	.05				
B	6	1-1-1-1-2-3	1 to 4	.23	3480	240	4350	300
			5	.06				
			6	.025				
A	6	1-1-1-1-2-4	1 to 4	.23	3408	235	4278	295
			5	.06				
			6	.014				

1. Staging ratios provide approximations of the relative area ratios for each specific trim type. As an example, a staging ratio of 1-1-2 indicates that the final stage for that trim type has approximately twice the area of the first two stages.
2. Staging ratios do not have any relative correlation between the different trim types.
3. Recommended limits for  $\Delta P$  per stage are 800 psi (60 bar) for continuous duty cycle applications and up to 1000 psi (70 bar)  $\Delta P$  per stage for intermittent service.

### 78400/18400 Series Optional Materials

Ref. No.	Temperature Range <sup>(1)</sup>	-20°F	450°F 600°F
	Description	Optional Materials	
19	Soft Seat S/A (2" to 8" Sizes)	See Below	
19A	Seat Ring	Standard - 17-4 PH St. St. ASTM A564 GR 630 Cond. H1075	
		NACE - 17-4 PH St. St. ASTM A564 GR 630 Cond. H1150M	
19B	Soft Seat Insert	Glass Reinforced PTFE (Fluorogold®)	
19C	Sliding Collar	Standard - 17-4 PH St. St. ASTM A564 GR 630 Cond. H1075	
		NACE - 17-4 PH St. St. ASTM A564 GR 630 Cond. H1150M	
20	Plug <sup>(2)</sup>	440B or 440C St. St. ASTM A276	
22	Packing <sup>(3)</sup>	LE® Packing <sup>(4)</sup>	
		PTFE with Carbon Fiber	
		Flexible Graphite	
23	Valve Bonnet <sup>(5)</sup>	316 St. St. ASTM A351 GR CF8M	
		Chrome-Moly Steel ASTM A217 GR WC9	
25	Valve Body <sup>(5)</sup>	316 St. St. ASTM A351 GR CF8M or ASTM A182 GR F316 (Forging)	
		Chrome-Moly Steel ASTM A217 GR WC9 or ASTM A182 GR F22 (Forging)	
Ref. No.	Temperature Range	-29°C	232°C 316°C

1. Consult Masoneilan for material combinations for temperatures below -20°F (-29°C) or above 600°F (316°C).
2. Optional plug designs using hardened 440B or 440C requires stems with male threads and plugs with female threads.
3. Teflon-based packing can also be applied up to 600°F (316°C) with an extension bonnet.
4. LE Packing for low emissions applications is limited to maximum operating pressure of 1500 psig (104 bar).
5. Consult factory for trim material requirements for 316 St. St. body and bonnet assemblies relative to application service conditions.

Review use of optional materials and configurations for temperature ranges indicated. Standard materials listed may still be applicable depending on specific service conditions. Consult Masoneilan for appropriate material combinations.

### Other Optional Materials<sup>(1)</sup>

Ref. No.	Temperature Range	-20°F	600°F
	Description	Optional Materials	
18	Liner <sup>(2)</sup> or Liner with Integral Seat	Ferralium® 255 ASTM A479 Duplex St. Steel	
19	Seat Ring <sup>(3)</sup>	Ferralium® 255 ASTM A479 Duplex St. Steel	
20	Plug <sup>(4)</sup>	Inconel 718 ASTM B637 GR 7178	
21	Stem	Nitronic 50 ASTM A479 TY XM-19	
Ref. No.	Temperature Range	-29°C	316°C

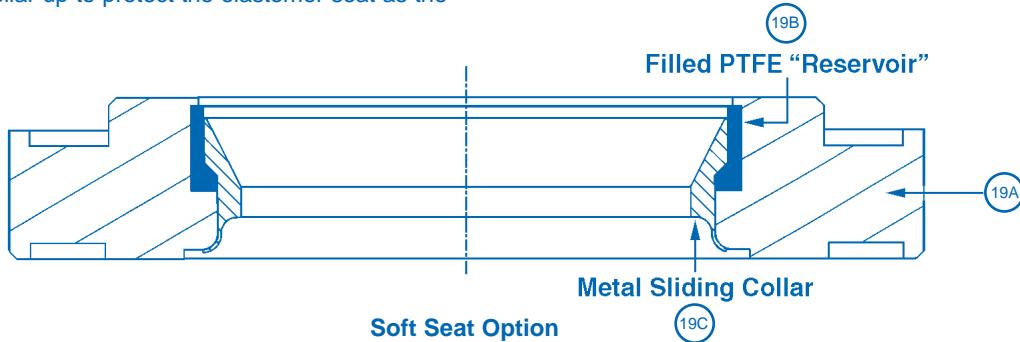

1. Listed are typical optional materials for refining applications, including sour water letdown, cold high-pressure liquid letdown, and amine service.
2. Material noted is recommended for the separate liner (2" to 8" sizes) or the liner with integral seat ring (1" and 1.5" sizes).
3. The standard 316 St. St. hard-faced seat ring can be applied in most of the refining applications noted except for amine service. Ferralium 255 is recommended for the separate seat ring in amine service.
4. Some material combinations may require electroless nickel or hard chrome plating to prevent galling. Consult factory for specific requirements.

## Soft Seat Design

The LincolnLog is available with an optional soft seat design in valve sizes 2" to 8" (DN 50 to DN 200) providing bubble tight Class VI shutoff seat leakage. This soft seat design includes a patented sliding metal collar feature as shown below.

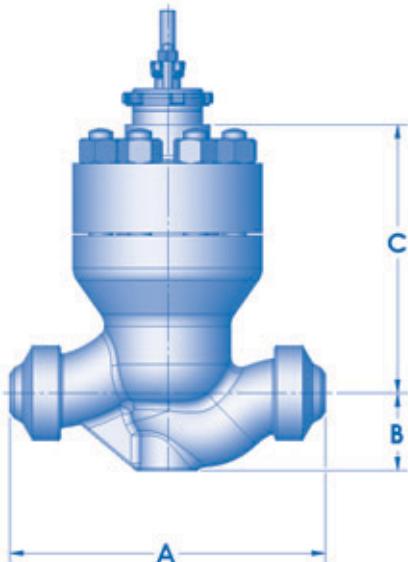

The metal collar holds the PTFE soft seat element in place and prevents it from extruding out during operation. Fluid pressure acts to push the collar up to protect the elastomer seat as the

valve is throttling. As the valve plug returns to the closed position, it moves the metal collar down to expose the filled PTFE "Reservoir" creating the soft seat interface. Combined with the LincolnLog trim overlap feature, the soft seat design will provide long-term dependable tight shutoff with minimal maintenance. The filled PTFE "Reservoir" will also compensate for any potential wear in the seating surfaces.
